WATER ANALYSIS

Water analysis is a critical process to ensure safety, quality, and regulatory compliance across industrial, commercial, and domestic applications. At [Cali-Labs Pvt.Ltd.](#) we conduct comprehensive physical, chemical, and microbiological testing using advanced instrumentation and standardized methodologies. Our analysis covers key parameters such as **pH, turbidity, total dissolved solids (TDS), heavy metals, microbial contamination, and other critical indicators** as per national and international standards including BIS and FSSAI guidelines. With a commitment to accuracy, reliability, and timely reporting, we help businesses maintain **product integrity, meet statutory requirements, and safeguard public health through precise and dependable water quality assessment.**

Ground Water / Surface Water

Water for food processing

Packaged Natural Mineral Water

Packaged Drinking Water

RO Water/Drinking water

Comprehensive chemical and microbiological analysis to ensure water safety, regulatory compliance, and suitability for food processing and consumption.

Packaged Drinking Water

- Aerobic Microbial Count @ 20 - 22°C, in 72 h
- Aerobic Microbial Count @ 37°C/24h
- Coliform
- Escherichia coli (E. coli)
- Faecal Streptococci
- Pseudomonas aeruginosa
- Salmonella
- Shigella
- Staphylococcus aureus
- Sulphite Reducing Anaerobes
- Vibrio cholerae
- Vibrio parahaemolyticus
- Yeast & Mould

RO Water/Drinking water

- Coliform
- E Coli
- Fecal Coliform

Ground Water / Surface Water

- Fecal Coliform
- Coliform
- E.Coli
